Short-Term Subacute Rehabilitation

Oak Brook offers one of the area's best programs in short-term rehabilitation. We specialize in care following surgery, an injury or a hospital stay. Our rehabilitation staff includes our board certified physiatrist, a doctor who specializes in rehabilitation medicine, physical therapists, occupational therapists, speech and language pathologists and respiratory therapists. Many of our staff are certified in specialty areas such as Kinesiotaping, Lymphedema treatment, wound care and balance therapy. Our goal is to provide intensive rehabilitation and maximize each individual's potential.

The beautiful view outside the Oak Brook Therapy Gym.

Gardenview: Alzheimer Care and Memory Support

Gardenview is dedicated to the care for people with early and mid-stage Alzheimer's and dementia. Gardenview features activity-based programs which are designed to help our resident's function as independently as possible while doing so in a safe and secure setting.

Many of our families discover that their loved ones make more progress in our environment than they might have at home. Activities are offered from early in the morning through out the day and early evening to provide each resident with a full range of meaningful and engaging activities. A home-like environment is created in Gardenview. And it is staffed with compassionate professionals.

Traditional Long Term Care

We provide long term care for those in need of supervision and assistance. Our Active Rehab Department is dedicated to these resident and is busy seven days a week creating activities that inspire mobility and independence.

Generations of families find comfort in the care provided at Oak Brook.

The CHOICE Program

CHOICE stand for "choosing how our individualized care evolves" which supports everything we do at Oak Brook. The CHOICE program is the foundation for our "resident driven" care model. Each resident makes his or her own decisions about when to get up, bath, or eat as well as when to participate in any or all resident activities such as outings, croquet, cooking class, book club or gardening. With CHOICE every aspect of our care evolves around the resident's preferences instead of the facility's time frame.
